

## Application Information

### Sensing pressure of film applied to a foam substrate.

Create a force measuring system that is repeatable for each part.

Part fits on a flat compression plate, and transfers force to loadcell on mounted FGV force gauge. Custom compression plates can be made and field stops intalled to prevent the plate from over loading the gauge.

### Equipment Used

- FGV-1XY (500 gram capacity), FG-M6COMP100U, 4" (100 mm) diameter or FG-M6COMP50V 2" (50 mm) diameter, compression plates
